Referring to the article titled "Health Coaching Reduces HbA1c in Type 2 Diabetic Patients from a Lower-Socioeconomic Status Community: A Randomized Controlled Trial" (Journal of Medical Internet Research, 2015, 17(10): e224), please answer the following questions.

- 1. What clinical question is the study aimed to answer? What are the public health aspects of the study? (10 marks)
- 2.
- a. What are the main results of this randomized controlled trial with regards to change in hemoglobin A1c (HbA1c) levels from baseline to 6 months between intervention and control groups as assessed by independent samples t tests using <u>intention-to-treat</u> and <u>per-protocol analysis</u> <u>principles</u>?
- b. What are the <u>between group</u> results of this randomized controlled trial with regards to i) body mass index (BMI) and (ii) Hospital Anxiety and Depression Scale (HADS) depression subscale at 6th month follow-up, respectively? (15 marks)

#### **QUESTION CONTINUES**

- 3. Discuss the main results and their implications on the management of HbA1c among patients with type 2 diabetes mellitus (T2DM). Please suggest the future research directions. (15 marks)
- 4. Comment on the internal validity of this publication and explain why. (25 marks)
- 5. Can the results be generalized to the situation in Hong Kong and why? (15 marks)

(20 marks for overall understanding and coherence of the answers)
